

# ABPS 2026-2027 Booklet of Information, Oral Exam section: coverage map

**Purpose.** A requirement-by-requirement check of the Oral Examination section (booklet pages 37 to 62, the file "2026-27 BOI oral exam, updated 7-14") against the preoperative visit note template, the interview and exam reminders, the five clinic commands, and the compliance protocol. Re-read in full on September 17, 2026. The July 14 file is word-for-word identical to the copy reviewed on September 16, so nothing in the earlier protocol is out of date.

**How to read the table.** "Where" names the file and section that carries the prompt. "Status" is one of: *was covered* (already there before this review), *added today* (added on September 17 in template v1.2, the reminders, the skills, or the protocol), or *not a note item* (an administrative requirement handled in the protocol calendar, with no place in a consult note).

## A. Requirements that shape the preoperative visit note

| Booklet page | Requirement                                                                                                                                      | Where                                                                                                                                                             | Status                                                                 |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 40, item 6   | Physician-patient relationship established in person at least the day before surgery, with discussion and examination by the operating surgeon   | Template Part 4 J (in-person pre-op visit with re-examination, dated); protocol B2                                                                                | was covered; "examine her again" added today                           |
| 40, item 6   | Postoperative care by the operating surgeon, not fully delegated                                                                                 | Template J ("I will see her myself"); reminders "Always mention"                                                                                                  | added today                                                            |
| 40, item 6   | In-person visit within 30 days recommended; 90-day photos mandatory; surgeon takes the first and 90-day photos; telemedicine between             | Template J; reminders; protocol B4, B5                                                                                                                            | was covered; surgeon-takes-photos and telemedicine wording added today |
| 40           | Preoperative photos of every case; modeling-software images (TouchMD, Crisalix) must be submitted if used                                        | Template K (used or not used, saved to chart); reminders "Always ask"; brief Board note                                                                           | added today                                                            |
| 40, 51       | ABPS records and photograph consent with the Board's verbatim language, patient signature, witness, date; sign the institution's consent too     | Template K (signed, dated, witnessed, with the practice consent); protocol A4 has the verbatim language                                                           | was covered; witness and date added today                              |
| 53, 55, 56   | Initial Evaluation tab: H&P, every preoperative note, consultants' reports; risks, alternatives, benefits, and patient education highlighted     | Template Part 3 item 5 (records reviewed, each consultant with date); Part 4 A to C (options, recommendation, risks, alternatives, benefits, written information) | item 5 and written-information prompt added today; A to C were covered |
| 60, 61       | Passing criteria: one clear initial plan you can defend; safe; recognition of complications with methods to avoid and treat them; a back-up plan | Template B (single recommendation with reasons), C (prevention and treatment sentence), D (backup), E, F                                                          | prevention-and-treatment sentence added today; the rest was covered    |
| 60           | Management/Treatment is rated on surgical indications, operative procedure, and appropriate anesthesia                                           | Template B, G (hours under general anesthesia, admission), H (facility, anesthesia)                                                                               | was covered                                                            |
| 60           | Safety: practices within acceptable standards, avoids excessive risk                                                                             | Template Part 3 item 4 (ASA, Caprini, nicotine, BMI, A1C), H (VTE)                                                                                                | was covered                                                            |

| Booklet page | Requirement                                                                                                                                                                                                                                                                                                       | Where                                                                                                                                                                                                    | Status                                                                            |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
|              |                                                                                                                                                                                                                                                                                                                   | prophylaxis, facility), M13 comorbidity lines                                                                                                                                                            |                                                                                   |
| 60, 59       | Ethics and economic issues: unnecessary procedures, abandonment, coding deception; discuss ethical or economic issues of the case                                                                                                                                                                                 | Template K (WHCRA, authorization), M6 (contralateral mastectomy is the patient's informed choice), M10 (declining systemic therapy), J (follow-up owned by the surgeon); Part 8 item 4 (codes as billed) | was covered                                                                       |
| 56           | Pertinent labs only; consider conditions and medications                                                                                                                                                                                                                                                          | Template I (every order carries its indication); note-check flags orders without indication                                                                                                              | indication wording added today                                                    |
| 56           | Radiology tab: dated images with reports; mammography reports without images suffice                                                                                                                                                                                                                              | Template Part 8 item 11; brief Board note                                                                                                                                                                | added today                                                                       |
| 42           | Research-protocol patients need IRB approval and study consent on file                                                                                                                                                                                                                                            | Template Part 3 item 5 and H; reminders "Always ask"; brief Board note                                                                                                                                   | added today                                                                       |
| 52           | EMR attestation: list every edit after case selection; the Board may pull revision history                                                                                                                                                                                                                        | Template Part 7 (sign today, dated addenda, no unlisted edits); protocol C4                                                                                                                              | was covered in protocol; added to the template sign-off today                     |
| 43 to 45     | Case Log fields that the consult decides: anesthesia type, admission status (any overnight stay is inpatient), duration skin to skin (plastic portion only with a non-plastic co-surgeon), procedure in words with microsurgery stated, CPT with modifiers (bilateral as one code with -50), Anatomy and Category | Template Part 2 (23-hour observation is inpatient) and Part 8; reminders "Case Log fields"; brief Board note; note-draft prints the fields                                                               | added today                                                                       |
| 42, 43       | Co-surgeon rules: with another plastic surgeon only if surgeon of record, pre-op assessment, final decision, all post-op care, separate operative report; with a non-plastic surgeon include the case, do not flag                                                                                                | Template Part 2 and Part 8 item 7; standing instructions                                                                                                                                                 | was covered in protocol and standing instructions; added to the template today    |
| 40, 44       | Maximum three cases per patient count; enter all cases; consistent identifier and at least two initials across facilities                                                                                                                                                                                         | Template Part 2 and Part 8 items 8 and 9                                                                                                                                                                 | added to template today; was in protocol                                          |
| 41           | Intraoperative photos after incision and before closure, every site, key step (defect and raised flap; device in pocket), ultrasound stills if used; closed-incision photos do not count                                                                                                                          | Template K (patient told photos are taken during surgery) and Part 8 item 10 (plan by procedure, ICG stills); protocol A4, B3                                                                            | photo plan by procedure added today                                               |
| 40, 41       | Minor cases and office procedures must be entered with photos (debridements, aspirations)                                                                                                                                                                                                                         | Template Part 8 item 13; reminders "Postoperative documentation"                                                                                                                                         | added today                                                                       |
| 45, 46       | Outcome at 4 to 6 weeks graded Major, Moderate, Minor; oral antibiotics, extra visits, and dressing changes are adverse events; "all cases do not heal without complications"; 30-day mortality field                                                                                                             | Reminders "Postoperative documentation"; protocol A3, B4, C4                                                                                                                                             | was covered in protocol; added to the reminders today so it is in the clinic file |

| Booklet page | Requirement                                                                                                                                                    | Where                                                                                                           | Status      |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|-------------|
| 57           | Discharge summary is the first page of the hospital notes tab; 50-page limit across hospital and clinic notes                                                  | Reminders "Postoperative documentation" (a discharge summary for every admission including 23-hour observation) | added today |
| 54, 55       | Narrative summary must describe prolonged dressings, oral antibiotics for erythema, extra consultants, adverse events, with a separate Outcome paragraph       | Reminders "Postoperative documentation" (document events the way the Log grades them)                           | added today |
| 40           | Each stage is a separate case: its own in-person pre-op visit, consent, risk documentation, and photographs; post-op photos preferably from the last procedure | Template Part 2 and J; reminders; protocol C4                                                                   | added today |

## B. Decision points the note must show (the examiner's questions, and where the prompt lives)

| Decision                                                      | Prompt                                                                                                        |
|---------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| Immediate versus delayed reconstruction                       | Template A (options with reasons), F (radiation contingency), M4, M5; brief "Options that fit and do not fit" |
| Implant versus own tissue                                     | Template A, B, M11, M13 obesity line; consult kit Section 11; reminders "Look out for"                        |
| Nipple preservation                                           | Template Part 3 item 3 (SN-N, N-IMF, ptosis), M1, M2; reminders exam numbers                                  |
| Expander plane                                                | Template E (intraoperative decision with the factors)                                                         |
| Skin pattern in the ptotic breast                             | Template M3; consult kit Section 12                                                                           |
| Chemotherapy before or after surgery, and the adjuvant window | Template Part 3 item 2, G, M9; kit Section 10; algorithm                                                      |
| Radiation likelihood and what changes if it comes             | Template Part 3 item 2, F (three versions), M4, M5; algorithm                                                 |
| Contralateral breast                                          | Template M6, M12                                                                                              |
| Pending results that gate the date                            | Template M7                                                                                                   |
| DCIS upstaging                                                | Template M8                                                                                                   |
| Patient declining recommended therapy                         | Template M10                                                                                                  |
| VTE prophylaxis                                               | Template Part 3 item 4 and H (Caprini number with a plan); kit Section 13                                     |
| Nicotine, glycemic control, anticoagulation, MRSA, hormones   | Template M13                                                                                                  |
| Backup plan if the first plan fails                           | Template D                                                                                                    |
| Prevention and treatment of each listed risk                  | Template C (added today)                                                                                      |

## C. Requirements with no place in a consult note (handled in the protocol calendar)

Peer evaluators (chief of surgery or plastic surgery, chief of staff, chief of anesthesiology, OR nursing supervisor, all other hospitals, fellowship director, a designated ABPS diplomate, a local diplomate the Board solicits); unrestricted license reported within 30 days of any action; active practice, no case collection during fellowship; inpatient admitting privileges from the first day of practice and only local-anesthetic cases before that; accredited facilities for sedation or

general anesthesia with certificates or an explanation; the shorter-than-9-month submission rule (yours runs from mid-September, so variety and complexity matter more than volume); weekly Case Log entry and a trial print; Candidate Affidavit (signed, not notarized); Medical Records Administration Affidavit per facility (notarized, same-day signatures, remote notary acceptable); case list physically received April 20, 2027 with the late window April 21 to 23; advertising April 2026 to April 2027 including third-party profile sites and the CV; assembly order; July notification of five cases with registration, licenses, all privilege letters, accreditation certificates; August 16 request for three additional cases and August 19 noon Eastern upload; the eleven case report tabs with notarized billing and CPT descriptors, the notarized Photographic Affidavit (no generative AI, cropping and labels only), and the EMR Attestation; examiner review in September and October; exam November 11 to 13, 2027; certificate name by December 1. All of these are in docs/ABPS-Oral-Boards-Compliance-Protocol.md Part A with dates, Part E with the cadence.

#### **D. Two items to confirm with the practice this week**

---

1. That the hospital and any surgery center allow intraoperative photography; if not, the Board requires a waiver request now, not later.
2. That the practice's photo consent already carries the Board's verbatim sentence and a witness line, since every patient seen from now on signs it at the consult.
